SUMMARY

Computer Engineering graduate (2024) with hands-on experience building backend systems using Java and Spring Boot. Developed 3 end-to-end projects covering REST API design, concurrency-safe transactions, relational schema modeling with PostgreSQL, and Docker-based deployment. Comfortable with debugging, root-cause analysis, and clean, well-documented code; additional hands-on work integrating Generative AI agents into backend services via Spring AI and Model Context Protocol (MCP). Strong fundamentals in OOP, data structures, and algorithms, with 200+ DSA problems solved in Java. Eager to grow as a backend engineer.

TECHNICAL SKILLS

Languages: Java (8–21), SQL

Backend & Frameworks: Spring Boot, Spring MVC, Spring Data JPA, Hibernate, REST API Design, JWT Authentication, Maven

Databases: PostgreSQL, Oracle, Relational Schema Design, JPA/Hibernate ORM, Transactions & Concurrency Control

Cloud & DevOps: AWS (Elastic Beanstalk, RDS, ECS), Docker, Docker Compose, Linux, Git, GitHub Actions, Postman

Generative AI (Basics): Spring AI, Model Context Protocol (MCP), LLM Integration

Core CS: Data Structures & Algorithms, OOP, Low-Level Design, Debugging & Root Cause Analysis, Complexity Analysis, DBMS & OS fundamentals

PROJECTS

Global Class Offering Booking System | *Java 21, Spring Boot, PostgreSQL, Docker, REST APIs*

[Source Code](#)

- Designed and built a scalable backend managing the full lifecycle of course offerings, multi-timezone scheduling, and booking workflows for a global education platform across 15+ REST endpoints.
- Improved reliability of concurrent bookings by implementing conflict detection and transactional integrity with Spring `@Transactional`, preventing double-booking under simultaneous requests.
- Engineered a timezone-aware scheduling engine using the Java Time API (`Instant`, `ZoneId`), eliminating cross-region time-conversion errors for users in different geographies.
- Modeled a normalized PostgreSQL schema (5+ entities) with JPA/Hibernate and optimized foreign-key relationships; containerized with Docker Compose and validated all endpoints end-to-end via Postman.

AI Ticketing System — Helpdesk Backend | *Java 21, Spring Boot, Spring AI, PostgreSQL*

[Source Code](#)

- Engineered a self-service helpdesk backend operating the complete ticket lifecycle — creation, automatic priority detection (Low/Medium/High), team routing, and resolution — modeled on incident-management workflows.
- Designed a rule-based classification engine with a pluggable service layer, enabling drop-in LLM/Generative AI classification without refactoring core services.
- Reduced debugging and root-cause-analysis time by implementing centralized global exception handling and the DTO pattern, producing consistent, observable error responses across all APIs.
- Modeled the PostgreSQL schema with Spring Data JPA across users, tickets, and teams; validated create, assign, prioritize, and resolve flows via automated Postman test runs.

NextGenCommerce — Agentic AI E-commerce Backend | *Java, Spring Boot, PostgreSQL, MCP*

[Source Code](#)

- Built an AI-integrated shopping-cart backend using Model Context Protocol (MCP), enabling Generative AI agents to safely execute real backend operations against live services.
- Designed and exposed 4 agentic MCP tools (`addToCart`, `removeFromCart`, `getCart`, `getCartTotal`) for LLM-driven agents to operate cart workflows end-to-end.
- Implemented a clean layered architecture with service abstraction, serving both AI-agent and traditional client-server interactions through shared business logic.
- Tested and debugged agent-tool execution flows end-to-end using Claude Desktop as the MCP client, validating reliability and correctness of AI-driven workflows.

EDUCATION

B.E. in Computer Engineering — Mumbai University

June 2020 – May 2024

CGPA: 7.0 / 10

CERTIFICATIONS & PROBLEM SOLVING

Certifications: [Java Full Stack Developer](#) | [DSA with Java](#) | [Udemy Java Programming](#)

Problem Solving: 200+ DSA problems solved in Java on LeetCode (arrays, strings, trees, graphs, dynamic programming)
